

## Home Energy Audit

Are you spending your energy dollars wisely? How do you know? Do you have enough insulation in your home? How much energy are you losing through leaky windows or doors. OMLPS makes it easy for you to find out.....and it's free!

OMLPS has developed a home energy audit program to help you identify areas of your home that gobble up energy and to inform you about the actions you can take to reduce your energy usage. We can provide recommendations on energy saving measures and cost-benefit analysis of implementing those measures.

Our trained technical services staff will perform the home energy audit by doing a walk-through of your home, gathering specific information about the home construction and condition using auditing software and equipment resources such as blower door and infrared camera equipment.
